

## Health and Safety

Providing a safe and healthy working environment for all those working at or visiting Fiberweb's facilities remains a high priority and a core business value for Fiberweb. A focus on HS&E is integral to Fiberweb's operations which aim to achieve the goal of zero injuries and zero adverse environmental impacts while at the same time promoting profitability and business growth.

Fiberweb continues to commit significant resources to ensure that all of its facilities provide a safe and healthy working environment for all employees and conform to HS&E regulations and Good Management Practices ("GMP"). Fiberweb's health and safety management system has been designed to identify workplace hazards and ensure proper safety precautions are implemented to minimise the risks associated with these hazards.

We recognise that a successful health and safety programme is dependent on the commitment of all of our employees. In 2010, Fiberweb actively managed the significant physical expansion experienced across the Group with no related injuries and continued compliance with strict HS&E regulations. We continue to evaluate our health and safety programmes and make careful and planned enhancements when required. The following key elements provide an overview of our health and safety programmes and performance.
