

Resource exchange process

In 2009, Fiberweb developed the HS&E Resource Exchange Programme (REX) for its facilities in the Americas. The REX programme was designed to promote the professional development of site HS&E Coordinators, to exchange HS&E management information across the Group and to assess HS&E compliance at Fiberweb's facilities.

Through structured meetings and assignments, the REX programme promotes interaction between HS&E Coordinators and site leadership and allows facilities to share best practice. In 2010 the REX programme was implemented across all sites in the Americas and will be expanded in 2011 to all other Fiberweb facilities.
